

TO WHO IT MAY CONCERN.

I am a professional truck driver. This service that satellite radio offers the professional truck driver with the traffic and weather channels is invaluable to me and other drivers .

The am and fm station may give the traffic and weather but it is so brief and given so fast you don't get a good picture of what is going on. you also have to know what time and channel to find it on.

With satellite radio you can click to the station long before you get in the city so you can avoid the jams .

This should be a safty issue insted of trying to get the traffic and weather off satellite you should demand they cover more citys
